Once vaccines were introduced this number shot up and peaked at almost 40% in

**September, 2021.** The large spike in summer is not due to a delay of harmful effects, but because vaccinating in Q3 was MUCH more dangerous than vaccinating in Q1 or Q2 (and the proportion of pregnant women who considered gene therapeutics in pregnancy a good idea probably increased throughout the year - thanks to the marketing campaign).

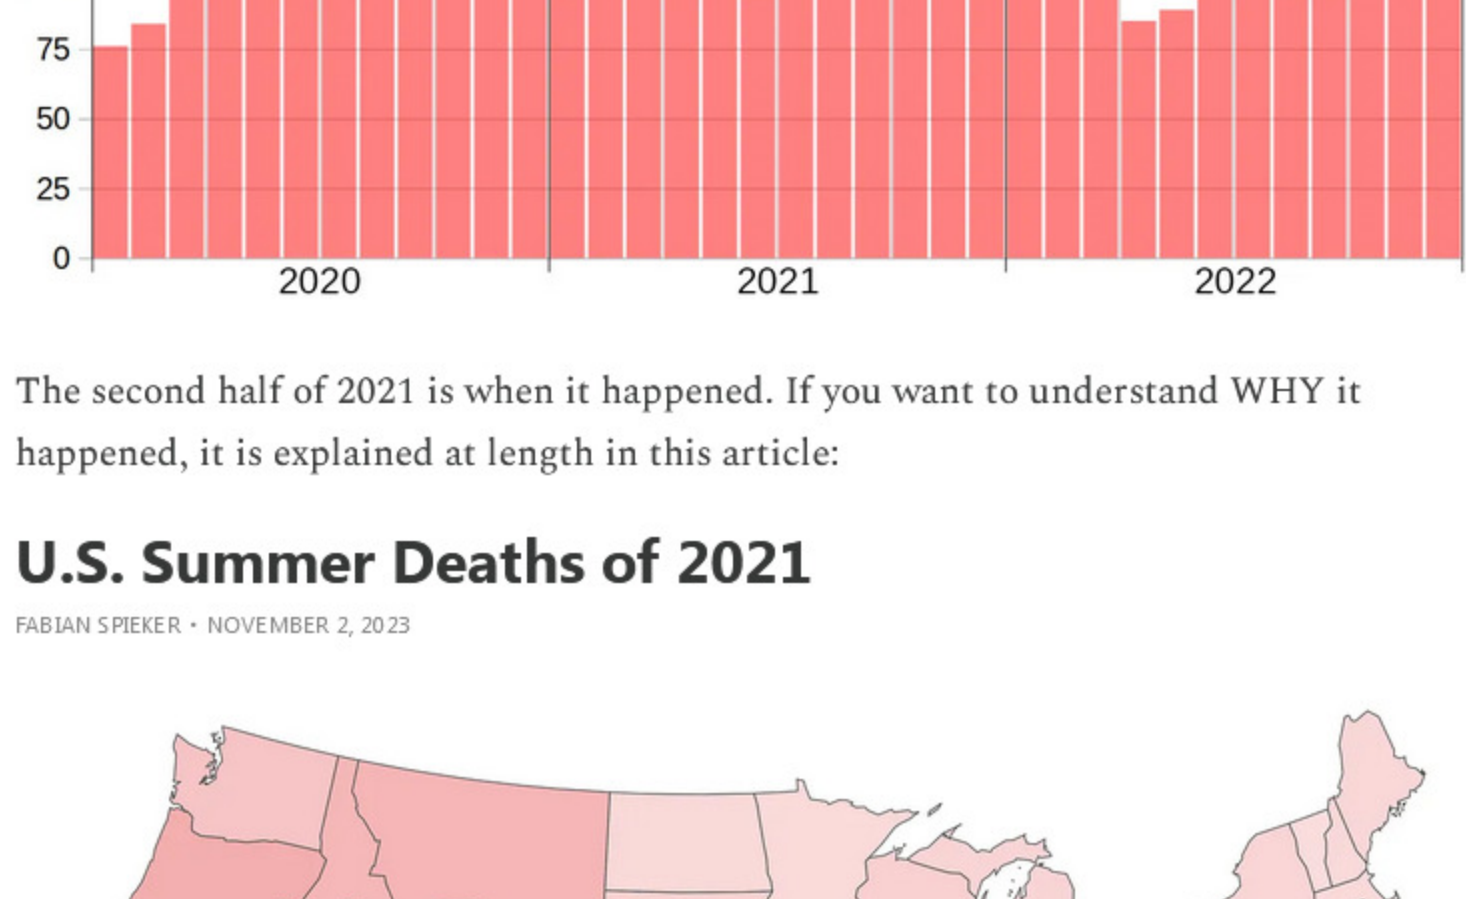

The bar chart displays the number of monthly deaths of pregnant women from COVID-19 in 2021. The y-axis represents the number of deaths, ranging from 0 to 250 in increments of 50. The x-axis lists the months from January to December. The bars show a significant increase starting in May, peaking in July at approximately 260 deaths, and remaining high through August and September before declining towards the end of the year.

Month	Deaths (approx.)

The bar chart displays the population aged 15 and over in 2017, categorized by sex and age group. The Y-axis represents the number of people in thousands, ranging from 0 to 125. The X-axis lists the age groups: 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70-74, 75-79, 80-84, 85-89, and 90+. The legend indicates that blue bars represent males and red bars represent females. The population is highest in the 20-24 age group for both sexes, with males at approximately 125,000 and females at approximately 120,000. The population decreases significantly in the 15-19 age group, with males at approximately 100,000 and females at approximately 95,000. The population continues to decline in the 25-29 age group, with males at approximately 95,000 and females at approximately 90,000. The population is lowest in the 85-89 age group, with males at approximately 50,000 and females at approximately 45,000. The population is slightly higher in the 90+ age group, with males at approximately 55,000 and females at approximately 50,000.

Age Group	Males (thousands)	Females (thousands)
15-19	100	95
20-24	125	120
25-29	95	90
30-34	100	95
35-39	105	100
40-44	110	105
45-49	115	110
50-54	120	115
55-59	125	120
60-64	125	120
65-69	125	120
70-74	125	120
75-79	125	120
80-84	125	120
85-89	50	45
90+	55	50

## U.S. Summer

The next chart is based on weekly data from CDC Wonder and represents the proportion of pregnant women dying with both a Q98.5 and U07.1 diagnosis among all cumulative deaths of women who died between the ages of 18-49 from 2020-2022.
