View 2020 report

Men’s violence against women is a leading cause of the premature death for women globally but research in the UK and Europe is limited and unconnected. The Femicide Census significantly improves upon currently available data by providing detailed comparable data about femicides in the UK since 2009, including demographic and social factors and the methods men selected to kill women. By collating femicides, we can see that these killings are not isolated incidents, and many follow repeated patterns. Please help us fund this vital work.
