

## Syphilis Surveillance Supplemental Slides, 2018–2022

[Print](#)

### Reported drug use continues to be high among heterosexuals with primary and secondary (P&S) syphilis

*Syphilis Surveillance Supplemental Slides, 2018–2022*, provides trends in surveillance data on selected behaviors reported among P&S syphilis cases in the United States during 2018–2022. It is best viewed as a companion to [Sexually Transmitted Infections Surveillance, 2022](#). Both of these publications are intended as reference documents for policymakers, program managers, researchers, and others who are concerned with syphilis and its public health implications.
